

Comment	Response
Table 5 in SSP 741S03 needs to be updated to include restrainable Type Z barrier as a category IV narrow option	Table 5 will be updated to include both the restrainable and non-restrainable Type Z barriers. However, they will both be category III due to the freestanding (no restraints) nature of table 5. Further, the item name associated with freestanding narrow barriers in the ministry's contract preparation system (CPS) will be corrected to reflect narrow, freestanding, category III. Lastly, a new item will be created in CPS and a new table included as part of SSP 741S03 for narrow systems, restrained, category IV.
